To whom it may concern:

Re: Maintenance of AHS-owned Clinical technology

AHS Clinical Engineering is one of the groups responsible for maintaining health care technology within our facilities.

Planned/Preventive Maintenance and Performance Verification is performed on equipment to the manufacturer's recommendations, CSA standards, and industry best-practices. This includes calibration where required, however routine calibration adjustments are rarely required (or possible) on modern medical equipment. Electronic Records of both planned and demand services are kept in our corporate maintenance management system, and are available for review upon request.

We trust this meets your requirements to ensure that the clinical technology used in research activities is maintained to manufacturer's standards and is routinely checked to verify performance meets specifications.

Please contact your local Clinical Engineering department, or myself, if you have any questions or comments.

Sincerely,

Bud Haycock, C.E.T
