## 70 The Faculty of Engineering

The University of Alberta's Faculty of Engineering has a long and illustrious history. Since 1908, when we offered our first engineering program, the Faculty of Engineering has been responding to the changing needs of the world around us. Today, we offer 20 accredited undergraduate engineering programs, as well as a full range of graduate programs, to over 3,000 students from around the world.

The mission of the Faculty of Engineering, which has remained virtually unchanged over our 90-year history, is

- to produce engineering graduates of choice for employers and postgraduate schools and to produce graduates who can carry out forefront engineering design and research
- to produce nationally and internationally recognized engineering research
- to provide high-quality service to the engineering profession and the external community

### The Engineering Profession

We are proud of the role we play in educating future professional engineers. In Canada, engineering is a profession with a powerful and revered tradition of ethics, accountability, and service. The completion of a BSc degree in Engineering from the U of A is the first step on the road to becoming a professional engineer. Following a specified period of work experience, our graduates are able to register with their local professional engineering association, and practise engineering across Canada and around the world.

In their final term, all U of A students take part in "The Ritual of the Calling of an Engineer," or, the Iron Ring Ceremony. Written by Rudyard Kipling specifically for the first Canadian Iron Ring Ceremony in 1925, "The Ritual of the Calling of an Engineer," is the obligation and traditional ceremony meant to symbolize and enforce the ethics of professional engineers. This ceremony is purely Canadian, and the iron ring, worn on the little finger of the working hand, is the unique identifier of a Canadian engineer.

### Faculty Awards and Accomplishments

Talented, successful teachers and researchers are key to our success as a Faculty. It is through the efforts of our professors that we are able to maintain our position on the leading edge of discovery and dissemination of engineering knowledge. Some recent awards and accomplishments of our faculty include

- Three Natural Sciences and Engineering Research Council (NSERC) Industrial Chairs and Senior Fellowships
- Three Royal Society of Canada Members
- A 3M Award for Excellence in Teaching
- A University Cup Award winner (a capstone award for excellence in both teaching and research)
- At least one Rutherford Award for Excellence in Undergraduate Teaching every year since 1993
- Three 1997 Alberta Science and Technology Awards—for Oil Sands Research, for outstanding leadership in Alberta Science, and for excellence in Science and technology public awareness through the Discover E Science Camps.

### Student Awards and Accomplishments

The Faculty of Engineering builds on the strengths of our students. High-quality programs, outstanding faculty, and top-notch facilities means that we have been able to attract exceptional students who are realizing their full potential. Some recent student awards and accomplishments include

- The two 1997 CD Howe Foundation Awards for the best male and female engineering student entering second year anywhere in Canada. This is the first time any university has received both awards in the same year.
- Two National Research Council, Women in Engineering and Science Program winners
- A Canadian Engineering Memorial Foundation Graduate Scholarship winner
- The Russell and Sigurd Varian Fellowship for work in vacuum science
- Winners of the Hybrid Electric Vehicle Challenge International Competition twice in three years
- Winners of the national design competition for improved methods for detecting buried landmines
- Students in the Faculty of Engineering received approximately \$1/2 million in scholarships in 1997-98.

# 71 The Professors

## Members of the Faculty

### Officers of the Faculty

**Professor and Dean**  
DT Lynch, PhD, PEng

**Associate Deans**  
KC Porteous, PhD, PEng  
PK Robertson, PhD, PEng

**Administrative Officers**  
RM Green, MA  
LE Swanson, MSC

### Chemical and Materials Engineering

**Professor and Chair**  
SE Wanke, PhD, PEng

**Professors Emeriti**  
N Berkowitz, PhD, PEng  
SA Bradford, PhD, PEng  
IG Dalla Lana, PhD, PEng  
DG Fisher, PhD, PEng  
W Nader, Dr Phil  
FD Otto, PhD, PEng, FCAE  
DB Robinson, PhD, PEng  
JT Ryan, PhD  
RK Wood, PhD, PEng

**Professors**  
KT Chuang, PhD, PEng  
RL Eadie, PhD, PEng  
TH Etsell, PhD, PEng  
MR Gray, PhD, PEng  
RE Hayes, PhD, PEng  
H Henein, PhD, PEng  
DG Ivey, PhD, PEng  
DT Lynch, PhD, PEng  
JH Masliyah, PhD, PEng, FRSC  
(NSERC Senior Industrial Research Chair in Oil Sands with Syncrude Canada Ltd)  
AE Mather, PhD, PEng  
K Nandakumar, PhD, PEng  
BM Patchett, PhD, PEng  
KC Porteous, PhD, PEng  
M Rao, PhD  
SL Shah, PhD, PEng  
ML Wayman, PhD, PEng  
MC Williams, PhD

**Associate Professors**  
SM Kresta, PhD, PEng  
Z Xu, PhD

**Assistant Professors**  
RP Batycky, PhD  
PYK Choi, PhD, PEng  
JAW Elliott, PhD, PEng  
JF Forbes, PhD, PEng  
M Guay, PhD  
B Huang, PhD  
D-Y Li, PhD  
S Liu, PhD, PEng  
J Luo, PhD  
TM Maccagno, PhD (NOVA/  
NSERC Junior Industrial Research Chair in Welding and Corrosion)  
WC McCaffrey, PhD  
PAJ Mees, PhD

### Civil and Environmental Engineering

**Professor and Chair**  
TM Hrudye, PhD, PEng

**University Professor Emeritus**

JG MacGregor, PhD, PEng, FRSC, FCAE

**University Professor**  
NR Morgenstern, PhD, PEng, FRSC, FCAE

**Professors Emeriti**  
PF Adams, PhD, PEng, FCAE  
KO Anderson, MSC, PEng  
JJ Baker, MSCE, PEng  
PH Bouthillier, MSC, PEng  
PM Dranchuk, MSC, PEng  
Z Eisenstein, PhD, PEng  
DL Flock, PhD, PEng  
EL Fowler, MSC, PEng  
WH Griffin, MSC, PEng  
DJL Kennedy, PhD, PEng  
GL Kulak, PhD, PEng  
EO Lilje, MSC, PEng  
J Longworth, MSC, PEng  
DW Murray, PhD, PEng  
TH Patching, BSc, PEng  
AW Peterson, MSC, PEng  
LR Plitt, MSC, PEng  
WW Preston, BSc  
JD Scott, PhD, PEng  
SH Simmonds, PhD, PEng  
S Thomson, PhD, PEng  
JP Verschuren, PhD, PEng  
J Warwaruk, PhD, PEng  
WA Weir, BSc, PEng  
JM Whiting, PhD, PEng  
GT Wormsbecker, BSc, PEng

**Professors**  
SM AbouRizk, PhD, PEng  
(Alberta Construction Industry/  
NSERC Senior Industrial Research Chair in Construction Engineering and Management)  
K Barron, PhD, PEng  
RG Bentsen, PhD, PEng  
DHK Chan, PhD, PEng  
J-J Cheng, PhD, PEng (CW Carry Chair in Steel Structures)  
DM Cruden, PhD, PEng (Joint Appointment with Geology)  
SP Dozzi, MEng, PEng  
AE Elwi, PhD, PEng  
SM Farouq Ali, PhD, PEng  
GR Finch, PhD, PEng  
FE Hicks, PhD, PEng  
IR Muirhead, MA, PEng  
AE Peterson, MSC, PEng  
N Rajaratnam, PhD, PEng  
PK Robertson, PhD, PEng  
DM Rogowsky, PhD, PEng  
DC Segoo, PhD, PEng  
DW Smith, PhD, PEng  
PM Steffler, PhD, PEng  
J Szymanski, PhD, PEng  
S Tepley, PhD, PEng

**Associate Professors**  
SDB Alexander, PhD, PEng  
KW Biggar, PhD, PEng  
CV Deutsch, PhD  
S Frimpong, PhD, PEng

TY Gan, PhD, PEng  
SJ Stanley, MSC  
CA Zeiss, PhD, PEng

**Assistant Professors**  
ST Ariaratnam, PhD  
ID Buchanan, PhD  
RJ Chalaturnyk, PhD, PEng  
QT Doan, PhD, PEng  
A Fayek, PhD  
GY Grondin, PhD, PEng  
WB Kindziarski, PhD, PEng  
B Lepski, PhD  
DZ Zhu, PhD

**Faculty Service Officer**  
GS Hoye, PhD

**Administrative Officer**  
L Padgham, BA, CGA

**Industrial Professor, Safety and Loss Management**  
AL Wilson, BSc, PEng

### Electrical and Computer Engineering

**Professor and Chair**  
CE Capjack, PhD, PEng

**University Professor Emeritus**  
GB Walker, PhD, PEng

**Professors Emeriti**  
KE Bollinger, MSC, PEng  
GS Christensen, PhD, PEng  
FS Chute, PhD, PEng  
GD Cormack, PhD, PEng  
CG Englefield, PhD  
PA Goud, PhD, PEng  
V Gourishankar, PhD, PEng  
PJR Harding, MASC, PEng  
CR James, PhD, PEng  
DH Kelly, PhD, PEng  
RW King, BSc, PEng  
YJ Kingma, Jr, PEng  
AA Offenberger, PhD  
RE Phillips, BSc, PEng  
RE Rink, PhD, PEng  
HG Schmidt-Weinmar, PhD  
PR Smy, PhD, DSc, PEng  
KA Stromsmoe, PhD, PEng  
WAG Voss, PhD

**Professors**  
MJ Brett, PhD, PEng  
NG Durdle, PhD, PEng  
R Fedosejevs, PhD, PEng  
I Filanovsky, PhD  
WD Grover, PhD, PEng  
WB Joerg, Dipl Math  
DO Koval, PhD, PEng  
WA Krzymien, PhD, PEng  
RPW Lawson, PhD, PEng  
RI MacDonald, PhD, PEng  
JN McMullin, PhD  
B Nowrozian, PhD, PEng  
AM Robinson, PhD, PEng  
D Routledge, PhD, PEng  
JC Salmon, PhD  
HJJ Seguin, PhD, PEng  
WR Tinga, PhD, PEng  
J Tulip, PhD  
JF Vaneldik, PhD, PEng  
FE Vermeulen, PhD, PEng

**Associate Professors**  
T Chen, PhD, PEng  
BF Cockburn, PhD, PEng  
SK Dew, PhD  
X Sun, PhD  
WW Xu, PhD, PEng

**Assistant Professors**  
AY Elezzabi, PhD  
DG Elliott, MASC, PEng  
C Hrischuk, MEng  
M Margala, DIng  
HJ Marquez, PhD  
Q-HM Meng, PhD

### Mechanical Engineering

**Professor and Chair**  
TW Forest, PhD, PEng

**Professors Emeriti**  
DG Bellow, PhD, PEng, FCAE  
DR Budney, PhD, PEng  
KC Cheng, PhD  
JR Colbourne, PhD, PEng  
A Craggs, PhD, PEng  
G Ford, DSc, PEng  
JB Haddow, PhD  
JS Kennedy, PhD, PEng  
GSH Lock, PhD, PEng  
DJ Marsden, PhD, PEng  
CM Rodkiewicz, PhD  
GW Sadler, MSC, PEng  
JC Sprague, PhD, PEng  
FH Vitovec, Dr TechSci, PEng

**Professors**  
MD Checkel, PhD, PEng  
JD Dale, PhD, PEng  
F Ellyin, PhD, PEng (NOVA/  
NSERC Senior Industrial Research Chair in Advanced Pipeline Materials)  
MG Faulkner, PhD, PEng  
WH Finlay, PhD, PEng  
AW Lipssett, PhD, PEng  
A Mioduchowski, PhD, PEng  
JD Whittaker, PhD, PEng  
DJ Wilson, PhD, PEng

**Associate Professors**  
KR Fyfe, PhD, PEng  
LW Kostiuik, PhD, PEng  
D Li, PhD  
P Schiavone, PhD  
LW Sigurdson, PhD, PEng  
RW Toogood, PhD, PEng  
JW Yokota, PhD  
M Zuo, PhD

**Assistant Professors**  
A Bhattacharyya, PhD  
C Ru, PhD  
Z Xia, PhD, PEng

**Faculty Service Officer**  
MY Ackerman, MSC, PEng

**Sessional Lecturer in Engineering**  
BR Touchings, LLB

### Engineering Co-op Centre

**Professor and Director**  
KC Porteous, PhD, PEng

**Assistant Director and Coordinator**  
CJ Ottosen, BEd

**Administrative Officers**  
G Bjornson, BA, Coordinator/  
Systems Administrator  
CM Ens, BCom, Coordinator  
JL Esdale, BEd, Coordinator  
RC Kully, BEd, Coordinator

BJ Strang, BA, Coordinator  
LJ Szekeley, BEd, Coordinator

### Additional Members of Faculty Council

**President and Vice-Chancellor**  
RW Fraser, PhD

**Registrar of the University**  
BJ Silzer, MEd

**Professors**  
JJ Leonard, PhD, PEng  
(Agricultural, Food, and Nutritional Sciences)  
JW Macki, PhD (Mathematical Sciences)  
TA Marsland, PhD (Computing Science)  
PE Prestwich, PhD (History and Classics)  
TJT Spanos, PhD (Physics)

**Associate Professors**  
JR Beamish, PhD (Physics)  
UM Maydell, MSc (Computing Science)  
JD Mulvihill, PhD (English)

**APEGGA Representative**  
VSV Rajan, PhD, PEng

**Representatives from Engineering Students**  
LA Liebl (Undergraduate)  
DB Mercredi (Undergraduate)  
V Sologar (Undergraduate)  
L Fraleigh (Graduate)  
S Trivani (Graduate)

## 72 General Information

### 72.1 BSc Engineering

The Faculty of Engineering offers undergraduate programs leading to BSc degrees in Chemical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Engineering Physics, Materials Engineering, Mechanical Engineering, Mining Engineering, and Petroleum Engineering.

All engineering students follow a common curriculum in their first year and take courses in Chemistry, Mathematics, Physics, Computing, Humanities, Engineering Mechanics, and Introduction to the Engineering Profession. In March of the first year, students choose among the various engineering disciplines offered and also between the traditional and cooperative education streams. The disciplines and education streams are described in the following sections.

The second-year program includes courses such as Mathematics and English, common to all departments, as well as courses specific to the chosen discipline. As students progress through the program, courses become more specialized. Also, exposure to basic business concepts is important to an engineering education. Programs for all disciplines include courses in engineering economics, and several engineering management and business electives are available.

Enrolment in all Engineering programs is limited.

### 72.2 Cooperative Education Program

The Faculty of Engineering offers two types of degree programs: the traditional program and the cooperative education program. Students in the traditional program attend classes from September to April over four years (eight academic terms) to obtain their degree. In the cooperative education program, students complement their academic studies with five four-month terms of paid work experience. The academic requirements for both programs are identical. Because of the work experience component, Co-op students complete the last six academic terms over four years, so a degree with the Cooperative Program designation requires five years.

The Cooperative Program is offered in all Engineering programs except Engineering Physics. Programs normally include one fall work term (September to December), one winter work term (January to April) and three summer work terms (May to August). See §74.4 for the sequence of academic and work terms. Because of the year-round nature of the Cooperative Program, Co-op students are considered full-time students of the University of Alberta for the full 12 months of any academic year (July 1 to June 30).

Students accepted into the Co-op Program must successfully complete the following six courses and the regular requirements for an Engineering degree within their specialization: ENGG 299, WKEXP 901, WKEXP 902, WKEXP 903, WKEXP 904, and WKEXP 905.

Because work experience is required, the Engineering Co-op Centre in the Faculty helps students find suitable employment. Most jobs are in Alberta, but some jobs are elsewhere in Canada or overseas. The ultimate responsibility for obtaining work-term employment is the student's. Co-op students pay a modest administrative fee for each work term. Visa students (student visitors) are not eligible for the Cooperative Education program.

### 72.3 Chemical Engineering

Chemical engineers design the complex plants needed to convert a laboratory or pilot-scale experiment into an industrial operation capable of producing tons of material daily. Chemical engineers supervise the construction of these plants, and are also involved in running and maintaining them. These activities call for a thorough understanding of the chemistry of a process and many other skills.

The chemical engineer must understand the physics and mathematics behind the problems of heat and mass flow when large quantities of reacting material must be heated or cooled, and moved from one section of the plant to another. He or she must understand the properties of the materials available to build the plant; how they tolerate high pressures and temperatures; and how they resist corrosion and wear. In the design and operation of biotechnology or environmental protection processes, the chemical engineer also needs to understand basic biological principles.

Students study the fundamentals of chemistry, physics, and mathematics, then learn engineering science and design. Selecting appropriate electives

allows students to specialize in advanced materials, biotechnology, engineering management, environmental engineering, petroleum and natural gas, polymers or process control. The computer process control option (described below) is unique to the University of Alberta.

Graduates are equipped to embark on careers in the chemical, petrochemical, food processing, forest products, pharmaceutical, and semiconductors industries, or work for a government agency.

#### 72.3.1 Computer Process Control Option in Chemical Engineering

With increased use of distributed digital computer control systems in the process industries and microprocessor-based analyzers and instruments, a need exists for process engineers with a background in areas that have traditionally been in the domain of the electrical engineer and computing scientist. This program, which retains all the core chemical engineering courses, provides the necessary background for engineering positions concerned with applying computers to the control of process systems.

Enrolment is limited.

#### 72.3.2 Elective Patterns in Chemical Engineering

In addition to the required courses, Chemical Engineering programs offer considerable flexibility through electives to develop interdisciplinary interests or to study certain fields in depth.

A brief description of some fields in which electives may be chosen follows:

- Advanced Materials and Polymers:** Advances in current technology are supported by new materials with unique properties, fabricated from metals, ceramics, semiconductors, and synthetic organic polymers. Developing these new materials involves a broad spectrum of basic science and engineering disciplines. Chemical Engineering students who select electives in the advanced materials program will be able to contribute significantly to this interdisciplinary field. As an alternative, students can focus on polymer materials, wherein the molecules are engineered to achieve unique properties. Chain-like polymer molecules are designed for end uses such as plastics, rubbers, fibres, films, and in combination with other materials to form composites. The chemical engineer, with a solid background in chemistry, is ideally suited for specialization in this area of materials engineering.
- Biotechnology:** Advances in molecular biology have given rise to important new biotechnology industries, which produce a range of products for medical, agricultural, food, and chemical applications. Chemical engineers work on the design, development, and operation of product and separation processes. Students can pursue specialization in biotechnology by supplementing their chemistry training with courses in the life sciences and biochemical engineering. This program also provides the necessary background for graduate study in engineering aspects of biotechnology.
- Process Control:** Industrial plants, although designed for steady-state operation, often do not operate in this manner due to planned changes in process conditions or unexpected disturbances, such as changes in raw materials. Process control addresses the development of control systems ranging from schemes that use simple instruments to sophisticated distributed digital computer systems that keep industrial units operating at the desired conditions. An introduction to some of the more advanced concepts in process control is available by selecting one or more of the appropriate elective courses given by the Department. Students interested in a career in the control and instrumentation field should consider the "Computer Process Control Option" described in §72.3.1.
- Environmental Engineering:** Because of the need to protect the quality of our environment, many chemical engineers are involved in developing technically and economically feasible solutions to environmental pollution problems. Chemical Engineering electives, and courses offered by the Departments of Civil and Environmental Engineering and Mechanical Engineering and by faculties outside Engineering, help students become aware of environmental technology and also serve as appropriate background for those who want to specialize in the environmental field.
- Engineering Management:** Chemical engineers are frequently employed in positions with a primary function of technical management. For engineers involved in production or design, many tasks involve establishing optimal operating conditions. The Department elective course in optimization, taken with courses offered by the Department of Mechanical Engineering in the operations management area, provides

pertinent background material for students interested in technical management.

By choosing proper electives, students may, depending on their academic standing, be able to select courses that may be applied for advance credit toward a Master of Business Administration (MBA) or Master of Arts (MA) in Economics.

- (6) **Oil and Natural Gas:** Chemical Engineering graduates are often employed in industries that produce, process and refine natural gas, petroleum, and oil sands. The Department offers electives in natural gas processing and properties of heavy oils and petroleum. Elective courses, concerned with petroleum production, are offered by the School of Mining and Petroleum Engineering.

## 72.4 Civil Engineering

Civil engineers apply science in planning, designing, constructing, operating, or managing airports, buildings, bridges, harbors, highways, flood control structures, transit systems, water supply and distribution systems, waste collection and storm drainage, and other public works. Today, civil engineers are asked to meet the challenges of pollution, deteriorating urban infrastructure, traffic congestion, energy needs, urban development, and community planning.

Civil engineering offers an unlimited range of career opportunities to satisfy individual interests, aptitudes, and goals. Civil engineers can specialize in one field or a combination of many technical specialties. They can direct their efforts into planning, design, construction, research, teaching, sales, or management.

The University of Alberta curriculum provides the preparation required for a career in civil engineering. All students take a core program that provides the basis for professional practice in the Civil Engineering disciplines of construction, environmental, geotechnical, structural, surveying, transportation, and water resources. Students then select elective courses in the fourth year to permit some specialization in these disciplines.

### 72.4.1 Disciplines in Civil Engineering

#### Construction Engineering

Construction engineers combine engineering and management disciplines to plan and execute projects. They apply their knowledge of construction methods and equipment to ensure that work is completed on time, within budget, safely, and in accordance with design specifications. Construction engineers lead a team of financial planners, technicians, tradespeople, and professional engineers from other disciplines.

#### Environmental Engineering

Environmental engineers incorporate principles of chemistry, biology, microbiology, mathematics, chemical engineering, and civil engineering to provide technological solutions to environmental problems such as water pollution control, providing safe drinking water, disposal and recycling of solid wastes, and hazardous waste. In addition, environmental engineers are concerned about the provisions of municipal services such as sewers, water mains, and solid waste collection.

#### Geotechnical Engineering

Geotechnical engineers analyze the properties of soils and rock, in the field and in the laboratory, that supports and affects the behavior of structures, pavement, and underground facilities. They evaluate potential settlement of buildings, stability of slopes and fills, analysis of landslides, groundwater seepage, and effects of earthquakes. Geotechnical engineers and structural engineers design the construction of dams, foundations of buildings, and tunnels.

#### Structural Engineering

Structural engineers plan and design various structures, including buildings, bridges, storage tanks, containment facilities, and towers. They analyze the forces that each structure must resist, select the appropriate construction materials (concrete, steel, timber, or other materials) and proportion all members and connections to produce a safe and economical structure. Structural engineers also plan and supervise the construction of these structures.

#### Surveying Engineering

Surveying engineers make precise measurements of the earth's surface to obtain reliable information for locating and designing engineering projects. They use data from satellites, aerial and terrestrial photogrammetry, and computer-processed satellite imagery. Their maps give accurate information

for building highways and dams, boring tunnels, plotting flood control and irrigation projects, and for all other areas of civil engineering.

#### Transportation Engineering

Transportation engineers plan and design the safe and efficient movement of people and goods. They construct and manage all types of transportation facilities.

#### Water Resources Engineering

Water resources engineers use their expertise in areas such as hydraulics, hydrology, fluid mechanics, coastal and river engineering, water resources management and planning, and mathematics and computer analysis to solve problems associated with the control and use of water. This includes flood control and protection, water distribution and wastewater collection systems, hydroelectric power development, road and pipeline river crossings, irrigation, drainage, coastal and bank erosion protection, and marine and river navigation facilities.

### 72.4.2 Environmental Engineering Option in Civil Engineering

Interest in design, construction, operation, and maintenance of developments with minimal effect on public and environmental health for all aspects of the biosphere is a major component of engineering. The ability to incorporate the principles of chemistry, biology, microbiology, mathematics, chemical engineering, and civil engineering to provide project analysis, technological solutions, risk assessment, impact minimization, and environmental management are the essentials of environmental engineering. The most common areas of interest are safe drinking water provision, water pollution control, solid and hazardous wastes disposal and recycling, and air quality control in industrial and municipal environments. Environmental engineers are also involved in providing municipal components such as water mains, sewers, storm sewers, and solid waste collection.

Enrolment is limited.

## 72.5 Computer Engineering

Computer engineering is concerned with the design of computer systems for their many applications.

A computer system consists of hardware and software components, and the computer engineer must be knowledgeable in the design of both. The Computer Engineering program provides the fundamentals of hardware design through courses in electrical circuits, electronics, digital systems, computer organization, and microcomputer systems. The fundamentals of software design are provided through courses in data structures, algorithm design, operating systems, and software engineering. Students also take courses in the key application areas of computers, namely control systems and communication systems. Students may take several elective courses in Electrical Engineering and Computing Science.

Computer engineers are uniquely equipped in being educated to design computer systems where the hardware and software components are closely coupled, and where both components are critical to the design's success. The background of our graduates is sufficiently broad that they are able to pursue careers in related areas, ranging from software design and systems analysis to electronics design.

Computer engineering draws on material from the two disciplines of electrical engineering and computing science. Because of this, the Computer Engineering program is offered jointly by the Department of Electrical and Computer Engineering and the Department of Computing Science. The program is administered by the Division of Computer Engineering (a division of the Department of Electrical and Computer Engineering) headed by the Director of Computer Engineering.

## 72.6 Electrical Engineering

Electrical engineering encompasses the study and understanding of all aspects of electrical phenomena in nature, and the application of the knowledge so gained to the benefit and betterment of society.

The fundamentals of electricity and magnetism, and the laws governing electric circuits, are explored in the introductory courses, branching into the specific areas of electrical engineering in the third and fourth years of study. There is plenty of opportunity for practical experience throughout the program. Laboratory experiments form an integral part of many courses, and various design projects are offered in the final year of study.

Students should contact the Department of Electrical and Computer Engineering for advice regarding selecting appropriate elective courses.

## 72.6.1 Elective Patterns in Electrical Engineering

### Electric Power Engineering

Power engineers use a background in mathematics, circuit analysis, control systems, electric machines, reliability, and computer software and hardware to design and maintain power-related devices and systems.

### Communications

Communications addresses the transmission of information from one point to another, using wires, coaxial cable, fibre-optics, or radio. Designing communications systems requires knowledge in such areas as network theory and statistical analysis, while designing elements that make up these systems draws heavily on digital and analog circuit design, signal processing and filtering, and electronics.

### Control Systems

The control of physical systems is an interdisciplinary subject that cuts across many specialized engineering fields. This versatile area ranks as one of the most promising fields, and its growth potentials are unlimited.

Senior undergraduate students in Electrical or Computer Engineering wanting to specialize in this area can select one or more elective courses given by the Department of Electrical and Computer Engineering in control systems, microprocessor design, and software engineering. They can also take courses in process control offered by the Department of Chemical and Materials Engineering, and courses in robotics and computer vision offered by the Departments of Electrical and Computer Engineering and Computing Science.

### Digital Systems Engineering

Digital systems engineers design hardware systems for a range of applications, including process control, robotics, digital signal processing, computers, communications, instrumentation, and analogue/digital conversion. The electives that make up the digital systems stream deal with low-level hardware design issues such as microprocessor system design, digital system design, and analog/digital electronics.

### Electronics

Electronics is an area of Electrical Engineering that may be applied to all fields of technology. It overlaps other areas of electrical engineering such as communications, digital, control, and power systems.

Electronics includes the study of solid state devices, integrated circuits (including fabrication technology), digital and analog circuits, VLSI, and computer-aided design. Electronics engineers use these devices and techniques to design and analyze systems that can be used in various applications from radio frequency or microwave systems to solving instrumentation problems. Electronics engineers require a broad background in all aspects of electrical engineering, with special expertise in circuit analysis techniques and a thorough understanding of electronic components and their uses.

## 72.7 Engineering Physics

The Engineering Physics program, offered in cooperation with the Department of Physics, leads to the degree of BSc in Engineering Physics. It is more fundamental than the Electrical Engineering program and provides students with an extensive background in mathematics and physics.

Students who want to take Engineering Physics must have a high standing in mathematics and physics and normally are required to have a minimum GPA of 7.0 in the first year. Exceptions to this rule may be made by the Chair of the Department of Electrical and Computer Engineering.

In this program, the core material consists of courses in the basic sciences and electrical engineering. This provides a basis for more intensive studies in a number of specialized areas in Electrical Engineering. These areas are covered by elective courses chosen to meet the student's requirements. Some of these areas are lasers, plasmas, communications, microelectronics, microwave, and high vacuum.

## 72.8 Materials Engineering

Materials engineering has evolved from dealing only with metals and alloys to being concerned with the production and engineering applications of metallic and non-metallic materials (polymers, ceramics, composites and electronic materials). Materials engineers develop, modify, and use processes to convert raw materials to useful engineering materials with specified desirable properties. The discipline therefore includes aspects of materials production, materials processing and materials applications and design.

Materials engineering embraces physics, chemistry and mechanics to understand processing and applying materials. Graduates of the program find employment in all sectors of the materials cycle. The primary sector is raw materials processing and includes such industries as mineral processing, aluminium smelting and steel making. The next sector is manufacturing and extends from the rolling and rod mills of the metals industry to the materials aspects of manufacturing various engineered products in the aerospace, automotive, electronics, photonics, and petrochemical industries. The final sector includes the service industries with such specialties as corrosion, wear, fracture mechanics and failure investigation. This sector would also include the recycling industries. The undergraduate Materials Engineering program, the only one of its kind in the prairie provinces, includes a balance of lectures and laboratory sessions emphasizing underlying principles and their engineering applications. The program deals with mineral processing, extractive metallurgy, physical metallurgy, ceramics, polymers, composites and various aspects of the behavior of materials in service including failure, wear, and corrosion. With the technical electives it is possible for the student to go into more depth in particular areas of interest. With a quota of only 25 students, the class size is smaller than many other disciplines.

## 72.9 Mechanical Engineering

Mechanical engineering covers a diverse range of engineering fields with five major areas of study: solid mechanics and dynamics, fluid mechanics, thermodynamics, mechanical design, and engineering management. Examples of more specialized areas of work are acoustics, aerodynamics, biomechanical engineering, combustion engines, energy conversion systems, environmental engineering, material science including fracture and fatigue, robotics and vehicle design.

The undergraduate program initially exposes students to a wide range of topics covering the fundamentals. Advanced courses and technical electives provide more specialized knowledge and emphasize applications. Many courses include experimental laboratories to give students hands-on experience with current engineering and measurement equipment. Throughout the program, several courses are devoted to mechanical engineering design. Working on individual and group projects, students apply engineering principles to challenging design projects and develop communication skills through oral and written presentations as well as preparation of drawings for fabrication in the department's machine shop. Computers are used extensively in the program; students are involved in programming and in using engineering analysis and design packages.

### 72.9.1 Areas of Study

#### Solid Mechanics and Dynamics

Mechanical engineers are involved in the design of structures and mechanical components to safely withstand normal working stresses. Many structures and machines are also subjected to additional stresses caused by vibrations, for example, due to the imbalance in a compressor or engine, and these effects can be critical for their safe use. Stress analysis predicts the internal loads in a component and allows the designer to select materials and shapes suitable for the service the component will experience. Traditional materials such as steel and aluminium as well as recently developed materials such as ceramics and fibre-reinforced composites are considered to optimize the component's performance.

#### Fluid Mechanics

Fluid mechanics is concerned with the motions of liquids and gases and the machinery that causes that motion (e.g., pumps) or uses it (e.g., windmills). Applications include acoustics, aerodynamics, meteorology, pollutant dispersion, pumps, fans, turbines, pipelines, and lubrication. Mechanical engineers with a specialization in fluid mechanics, design, and improve a wide range of fluids-related equipment as well as investigate concerns related to the flow of water and air in the environment. Another major area of work for mechanical engineers with a fluid mechanics background is in the aerodynamics industry designing everything from wings to jet engines.

#### Thermodynamics

Applied thermodynamics is the study of energy conversion from one form to another. A typical application is electricity production. Energy from the combustion of fuels like coal, oil, or natural gas is used to heat a fluid such as air or water, and then the fluid is expanded through machinery to produce mechanical work and drive a generator. The electricity produced is an easily transported form of energy that can be used at locations remote to the original energy source. Mechanical engineers with a specialization in thermodynamics design and improve power plants, engines, heat exchangers, and other forms of equipment. Specific examples include heating, ventilation and air

conditioning systems for living space and industrial processes, use of alternate fuels in engines, and reducing pollution from internal combustion engines.

### Design

The design process starts with recognizing a need for a new product, device, or industrial process and then carries on to defining the problem to be solved, gathering necessary information, performing the required analysis and optimization, building prototypes, and evaluating different concepts. There is usually no single correct solution for a given design problem as different designs may all solve the same problem. Some designs are better than others, as they may be lighter or more efficient or cost less, so that by constant refinement and iteration throughout the design process, acceptable designs can be made.

### Engineering Management

Many engineering graduates spend a significant part of their career as managers of plants, companies, or other engineers. Engineering management bridges the gap between engineering and management. These engineers deal with areas such as management of engineering processes, engineering economics, operations management, quality improvement, quality control, and the use of computers in business.

## 72.10 Mining Engineering

Mining engineers deal with the application of science and technology in the planning, design, development, optimization, operation and management of surface and underground mining and mineral exploration projects. A particularly important challenge that faces mining engineers in today's environment is to design and implement mining systems to extract minerals with sound environmental technology while maximizing the return on investors' capital. The major employers of mining engineers include surface and underground mining companies, mineral exploration companies, equipment manufacturers and dealerships, consulting companies, and teaching and research institutions.

The Mining Engineering curriculum at the University of Alberta covers the following core areas of study: ore reserve modelling and grade control, computerized mine planning and design using commercial software packages, mineral economics, mine production engineering, rock and soil mechanics, rock fragmentation, mine ventilation, mine environmental technology, surface and underground mining technology, mine survey, and economic and structural geology. The curriculum is designed to prepare prospective mining engineers with the tools to succeed in a variety of career opportunities including ore reserve analyst, mine planning engineer, mine production engineer, mineral economist, mine systems engineer, mine maintenance engineer, mine geotechnical engineer, mine reclamation engineer and mine manager.

Ore reserve analysts apply geometric, statistical, probabilistic and geostatistical methods for ore reserve modelling and grade control required for investment decisions, mine planning, design and production. Mine planning engineers use analytical and computer-aided design tools to design and optimize surface and underground mine layouts for efficient extraction processes. Mine production engineers supervise labor and mine equipment to achieve short and long range production targets using efficient and safe operating standards. Mineral economists apply the principles of mathematics, economics and finance in evaluating the economic potential of mining projects, analysis of investment risk and uncertainty and commodity markets analysis and pricing.

Mine systems engineers apply operation research techniques for efficient unit mining operations in the development-production networks. Mine maintenance engineers design and implement preventive, breakdown and repair maintenance programs for the efficient and safe use of mine equipment in production. Mine geotechnical engineers design and implement programs to ensure the stability of underground mine openings, surface mine slopes, and waste and tailings dumps. Mine reclamation engineers design and monitor reclamation of landscapes after mine closure. Mine managers use management and engineering principles to manage the overall mining operations to meet short- and long-term goals.

## 72.11 Petroleum Engineering

Working in the upstream sector of the oil and natural gas (O and NG) industry, petroleum engineers are responsible for the technical and economic analysis leading to the appraisal, development, and production of O and NG reserves. Petroleum engineers apply scientific principles to the challenge of drilling wells into underground formations, and to provide safe and efficient production of O and NG reserves. They appraise the value of the resource and manage the reservoir to maximize returns. Petroleum engineering

encompasses skills from a broad array of scientific disciplines, including geology and chemical, civil, and mechanical engineering.

Most graduates find work in the Canadian O and NG industry, while some choose to work overseas. Others work in areas where their training has given them appropriate skills, such as in underground contaminant flow. Our undergraduate degree program is the only accredited petroleum engineering program in Canada.

## 72.12 Combined Degree BSc in Engineering/ Master of Business Administration

The Faculty of Engineering has an arrangement with the Faculty of Business whereby students with suitable academic standing may choose electives which can be applied for advance credit toward a Master of Business Administration (MBA) degree. In this way, it is possible to complete part of the MBA degree requirements during the undergraduate engineering program. The MBA degree requires at least one additional year of study after graduation with a BSc in Engineering.

Because of the limited number of electives in some engineering programs, the combined program is not practical in all disciplines. Second-year students interested in this program should consult their Department for complete details.

## 72.13 Biomedical Engineering

Biomedical engineering is concerned with the application of engineering and the basic sciences to the solution of problems arising in medicine and biology. In its application to human physiology, biomedical engineering involves the understanding of body processes, the diagnosis of different body conditions and the rehabilitation of bodily functions. The tremendous complexity and variety of problems associated with the aforementioned areas require the involvement of engineers of all backgrounds.

While the University of Alberta does not offer a formal undergraduate program in biomedical engineering, to help students understand and prepare for employment in this area, a series of undergraduate technical electives is available in areas such as physiology, medical instrumentation, medical imaging, modelling of biological systems and biomechanics. In addition, an enhanced graduate program is offered jointly by the Universities of Alberta and Calgary.

For further information contact the Chair, Department of Biomedical Engineering, Faculty of Medicine and Oral Health Sciences or a Faculty advisor in any Engineering department.

## 72.14 Business Course Electives for Engineering Students

For those students who do not wish to take an MBA but want some exposure to Business courses, the Faculty of Engineering has an agreement with the Faculty of Business to permit a limited number of Engineering students to take Business courses. Areas include accounting, finance, industrial relations, and management science. Interested students should contact their Program Advisor for referral to the Engineering-Business Advisor.

## 72.15 Honors Mathematics Courses

Students with exceptionally high interest and ability in mathematics may replace certain engineering mathematics courses with honors mathematics courses. These students would follow the honors sequence MATH 117, 118, 217, and 317, and the honors linear algebra-differential equations sequence MATH 127 and 336. Students should contact the Honors Chair of the Department of Mathematics for an interview and approval to register immediately after receiving notification of their admission to the first-year Engineering program.

## 72.16 Industrial Safety and Loss Management Courses

Safety, risk, and loss management principles applicable to all industries are covered in ENGG 404 and ENGG 406. These courses provide a basic understanding of the integrated practices of reducing risks to people, environment, assets, and production. The key role of Engineering and Business graduates in this expanding field is explored, including emphasis on the proactive team approach.

## 72.17 Arrangements with Other Institutions

### 72.17.1 Engineering Transfer Programs at Alberta Colleges

Students may complete their first year of Engineering at any of the following Alberta postsecondary institutions: Grande Prairie Regional College, Keyano College (Fort McMurray), University of Lethbridge, Medicine Hat College, Grant MacEwan Community College, Mount Royal College, and Red Deer College. Students who complete the Engineering Transfer Program at one of these institutions may apply to enter second-year Engineering at the University of Alberta and will be considered for program placement on an equal basis with continuing University of Alberta Engineering students.

### 72.17.2 Transfer Credit Agreement between the University of Alberta and the University of Calgary Faculties of Engineering

A transfer student may obtain credit for a full year of the Engineering program at either the University of Calgary or the University of Alberta by completing courses at a transfer institution equivalent to the following:

Course Type	University of Calgary	University of Alberta
Two Chemistry Courses	ENGG 201 CHEM 209	CHEM 103 CHEM 105
Three Engineering Physics Courses	PHYS 269 ENGG 203 ENGG 249	PHYS 130 ENGG 130 ENPH 131
Two Calculus Courses	AMAT 217 AMAT 219	MATH 100 MATH 101
One Linear Algebra Course	MATH 221	MATH 102
One Computing Course	ENGG 233	ENCMP 100 (see Note 1 below)
One Introduction to Engineering/Writing Course	ENGG 215 (see Note 2 below)	ENGG 215 (see Note 2 below)
One Elective	As chosen by the student in accordance with the regulations of the Faculty involved (see Note 3 below)	As chosen by the student in accordance with the regulations of the Faculty involved (see Note 3 below)

#### Notes

- Students transferring to the University of Calgary will not be granted credit for ENCMP 100. Students transferring to the University of Alberta will be given credit to take the place of ENGG 233.
- Students transferring to the University of Alberta will receive credit for ENGG 100, ENGG 101 and ENGL 199. Students transferring to the University of Calgary will receive credit for a Complementary Studies elective.
- A student may wish to take a Complementary Studies course or
  - for transfer to the University of Calgary—(University of Calgary PHYS 259 equivalent) Electricity and Magnetism
 

**Note:** Students entering Year 2 at the University of Calgary who wish to transfer directly into the Department of Electrical, Mechanical, or Geomatics Engineering must have the equivalent of PHYS 259.
  - for transfer to the University of Alberta—(University of Alberta MATH 102 equivalent), Applied Linear Algebra
 

**Note:** Students transferring to the Civil Engineering program at the University of Alberta cannot obtain transfer credit for both PHYS 259 and PHYS 269.
- Students transferring from Engineering at the University of Alberta to Engineering at the University of Calgary are assured full course-by-course credit for all required courses with a grade of 5.0 or higher.
- Students transferring from Engineering at the University of Calgary to Engineering at the University of Alberta are assured full course-by-course credit for all required courses with a grade of C- or higher.

### 72.17.3 Transfer from Alberta Technical Institutes

Students from Alberta Institutes of Technology (e.g., NAIT, SAIT) should refer to the *Alberta Transfer Guide* for information on potential transfer credit.

### 72.17.4 Geomatics Engineering at the University of Calgary

The University of Calgary offers a four-year program leading to a BSc in Geomatics Engineering. After appropriate practical experience, a graduate may register as a Professional Surveying engineer and/or a Provincial and/or Canada Lands Surveyor.

A student interested in a career in geomatics (surveying) may take the first year of Engineering at the University of Alberta. On successful completion of the first-year program, students would be admitted to the second year of Geomatics Engineering at the University of Calgary. For information regarding Geomatics Engineering at the University of Calgary, please write the Dean, Faculty of Engineering, University of Calgary, Calgary, Alberta T2N 1N4.

### 72.17.5 BSc Program in Agricultural Engineering

The University of Saskatchewan offers a four-year program leading to the BSc in Agricultural Engineering. Students wanting to transfer to the Agricultural Engineering program at the University of Saskatchewan following one year of engineering at the University of Alberta should write to Head, Agricultural Engineering Department, College of Engineering, University of Saskatchewan, Saskatoon, Saskatchewan S7N 0W0.

### 72.17.6 Exchange Program with Ecole Polytechnique

Students in the Faculty of Engineering at the University of Alberta may participate in an exchange program whereby one year of their studies is completed at Ecole Polytechnique in Montréal. Ecole Polytechnique, affiliated with the University of Montréal, is one of the premier schools of engineering in Canada and is the largest French-language school of engineering in the country. Students must have demonstrated superior academic ability and be fluent in French. The exchange normally takes place in a student's third year. Exchange programs are available in all engineering programs except Petroleum Engineering. Please consult the Associate Dean (Student Services), Faculty of Engineering, for more information.

### 72.17.7 Exchange Program with the Technical University of Berlin

Students in the Faculty of Engineering at the University of Alberta may participate in an exchange program with the Technische Universität Berlin (TUB). Students may attend TUB for one year as part of their BSc program in Engineering. Students must have demonstrated superior academic ability and be fluent in German. Programs are available in various engineering disciplines. Consult the Associate Dean (Student Services), Faculty of Engineering, for more information.

## 72.18 Special Students

Students with a BSc in Engineering or a Science specialization (e.g., Mathematics, Physics, Chemistry, Computing Science, Geology), may register as special students in the Faculty. For further information regarding admissibility, see §12.2(7).

## 72.19 Graduate Studies

The U of A's flourishing research programs indicate a commitment to scholarship, pursuit of knowledge, and the application of that knowledge to the solution of contemporary problems. There are graduate programs in many fields of engineering leading to the degrees of Master of Science (MSc), Master of Engineering (MEng), and Doctor of Philosophy (PhD). A combined Master of Business Administration/Master of Engineering (MBA/MEng) degree program is also available. For more information on Graduate Studies, contact the individual engineering departments.

## 72.20 Professional Associations and Technical Societies

All Engineering programs listed in the Calendar are accredited by the Canadian Engineering Accreditation Board of the Canadian Council of Professional Engineers. Therefore, graduation from the Faculty of Engineering

can lead to registration as a professional engineer in the provincial associations of professional engineers, in accordance with their individual policies.

The practice of engineering throughout Canada is regulated by professional associations in each province. The right to practise and accept professional responsibility is limited to those registered with the professional organization in the province concerned. In Alberta, this is the Association of Professional Engineers, Geologists, and Geophysicists of Alberta (APEGGA). Members of the Engineering Students' Society are automatically student members of the Association. Graduates are encouraged to join the Association as Engineers in Training. Four years of acceptable experience following graduation are necessary for registration as a professional engineer.

The practising engineer keeps abreast of technological developments through membership in one of several technical societies. Student branches of these societies (CSAE; CSChE; CSCE; IEEE; CSME; CIM; ISA; SPE) have active chapters on campus. Engineering students are encouraged to join the society closest to their specialty.

## 73 Faculty Regulations

### 73.1 Admission and Registration

General University admission requirements are set out in §§13 and 14. Specific admission information for the Faculty of Engineering is detailed in §15.6.

### 73.2 Residence Requirements

A student proceeding toward a BSc degree in Engineering must normally attend at least the equivalent of two academic years in the Faculty of Engineering and complete four full terms of approved coursework comprising a minimum of 72 units of credit. This should comprise the last four terms of the student's program.

Where a student has been accepted as a transfer student from another accredited engineering program at a Canadian university and has the equivalent of six full terms of transfer credit, reducing the residence requirement to one academic year consisting of two full terms may be considered.

### 73.3 Academic Regulations

(1) **Admissions:** The Faculty of Engineering admits students into a first- or qualifying-year program and into specialized programs at the second-year level. All admissions are on a competitive basis.

There are 590 entry places in the first year and 580 entry places in the second year of the Engineering program (75 Chemical; 110 Civil; 30 Civil-Environmental; 65 Computer; 115 Electrical (including Engineering Physics); 115 Mechanical; 25 Materials (Metallurgical); 15 Mining; 30 Petroleum). Approximately 35% of the entry places within each discipline are allocated to the cooperative education program.

Entry to a specialized program is based on the student's academic performance in the first, or qualifying, year. All students in the qualifying year, and new applicants to the Faculty with previous postsecondary education, must submit a Second Year Engineering Program Selection Form (PSF) by the document deadline noted in §12. Forms are provided to qualifying year students in ENGG 101. Program Selection Forms are mailed to other applicants by the Registrar's Office on application. All applicants with previous postsecondary education must submit a PSF. Applicants who do not have sufficient transfer credit for a second-year program (to be determined by the Faculty) may be considered for a qualifying year.

A student entering the Faculty directly from high school, or with fewer than 15 units of transfer credit, must normally qualify for a specialized program in not more than four terms (two years); those with 15 units or more of transfer credit must qualify in not more than two terms (one year). A student who is offered admission to a specialized program after two terms has qualified and may not continue as a qualifying student. Students who fail to qualify within the indicated number of terms are required to withdraw and are not normally readmitted to the Faculty.

#### (2) Engineering Graduation Average

- The Engineering Graduation Average (EGA) is based on the final four academic terms. If the course load in these terms totals less than 70 units, additional terms will be included in the calculation of the EGA as required to reach a total of at least 70 units. The 70 units include courses designated as extra to degree. Grades for courses taken in summer (May to August) are not included in the EGA unless this is a scheduled term within the student's degree program.
- Requirements to Graduate:** To graduate, a student must
  - pass all courses required by the specific program;
  - have an Engineering Graduation Average of 5.0 or greater. A student who is otherwise eligible to graduate but has an EGA of less than 5.0 is permitted to return for one additional term to take courses, as specified by the Dean, to raise his/her Engineering Graduation Average (EGA);
  - be in satisfactory academic standing, i.e., have a Session GPA of 5.0 or greater.

(3) **Time Limit for Completion of Degree:** All students must complete their degree requirements within six calendar years from the time of their initial admission to a specialized degree program in Engineering.

#### (4) Course Load

- Students in specialized degree programs may not normally take a course load with fewer than 28 units per session (or 14 units per term).
- Students in their qualifying year may not normally take a course load with fewer than 37 units per session, excluding the 2.0 units for ENGG 100/101.

(5) **Promotion to Next Session:** A student's progress is evaluated on completion of academic studies for Winter Session and on completion of any academic term occurring in summer (May to August) that is a scheduled term within the student's degree program. Scheduled terms are those shown in §§74.3 and 74.4. Evaluation is on the basis of the Session GPA (see §23.4(7)) or its equivalent based on all courses taken during summer (May to August).

- Satisfactory:** Session GPA of 5.0 or greater. Proceed to next session, repeating any failed course(s).
- Marginal:** Session GPA of 4.5 to 4.9 inclusive. Proceed to next term on academic warning (also known as probation), repeating any failed course(s) and other courses as specified by the Dean, unless one of the following conditions applies, in which case the student must withdraw:
  - Previously on academic warning on two or more occasions.
  - Previously required to withdraw and previously on academic warning.
  - Session course load was less than 28 units.
  - Already on academic warning.

Students on academic warning will be evaluated at the end of each term. Summer (May to August) is not considered a term unless it is a scheduled term within the student's degree program. To clear academic warning, a student must achieve an engineering term average of at least 5.0 while carrying a minimum course load of 14 units.

If a student is in his/her final session and has achieved a Session GPA of 4.5 to 4.9 inclusive, one more term is allowed in which the student must complete the degree requirements by carrying a course load of at least 14 units (courses to be specified by the Dean) and obtaining an engineering term average of at least 5.0.

- Unsatisfactory:** Session GPA less than 4.5. Student must withdraw.

(6) **Work Experience Credit:** Work Experience (WKEXP) courses in the cooperative education program are graded on a Pass/Fail basis. A student receiving a grade of Fail is normally required to withdraw from the cooperative program and the Faculty of Engineering.

(7) **Deficiencies from a Previous Term:** Where a student is deficient in credits in a course (or courses) from a previous term, through failure or otherwise, that student must normally clear that deficiency the next time the course (or courses) is (are) offered.

Where the deficiency is the result of failure or withdrawal from an elective course, another course may be substituted if Faculty approval is first received to do so.

(8) **Readmission after a Requirement to Withdraw:** A student required to withdraw must stay out for two terms before being eligible for readmission. In this context, summer (May to August) is not counted as a term unless it is a scheduled term within the student's degree program.

When readmitted, a student must take all the previously failed courses and other courses as specified by the Dean. For students in the co-op program, readmission must coincide with the start of an academic term. A student required to withdraw a second time is not normally readmitted to the Faculty of Engineering.

- (9) **Withdrawal from Courses:** (See §11 Academic Schedule for deadline dates.)
- (10) **Reexaminations:** See §23.5.5.
- (11) **Part-Time Students:** A student unable, for acceptable reasons, to carry the course load required in §73.3(4) may enrol part time but must meet the normal Faculty residence requirements and time limits specified in §73.2 and §73.3(3).

(12) **Academic Awards and Recognition**

a. **Awards and Scholarships**

A number of scholarship competitions are open to high school students who plan to study Engineering at the University (see §30.2 through 30.9). Students who are continuing in the Faculty may apply for various awards (see §31 to 31.6). In addition, a number of awards are made by Faculty or Department nomination (see §31.7.18). Awards and scholarships are awarded based on the work of an academic session (two terms), in which a student has carried a full course load. For University-wide award competitions, this is the course load calculated from §74.2, 74.3, or 74.4 as appropriate. In the case of Faculty and Department awards, a full course load is defined as at least 35 units.

Co-op students are eligible for awards and scholarships after the 4th, 6th and 8th academic terms. Awards are based on the work taken in the previous two academic terms. A student must carry a minimum of 35 units in the two combined academic terms. This means that normally co-op students are not eligible for awards in the third year of their program.

b. **First-Class Standing**

First-class standing is awarded based on a Session GPA of 7.5 or greater, while carrying a course load of not less than 35 units in an academic session (two terms). For students following the traditional program, the academic session comprises the two terms of Winter Session (September to April). Co-op students are awarded first-class standing on completion of the 4th, 6th and 8th academic terms.

c. **Graduation "With Distinction"**

- To graduate "With Distinction," a student must have
- an Engineering Graduation Average of 7.5 or greater, and
  - carried at least 70 units in the final four academic terms.

(13) **Appeals**

- a. **Academic Standing:** A student wanting to appeal an academic standing decision must first attempt to resolve the issue with the Faculty of Engineering, Associate Dean (Student and Co-op Services). If the matter remains unresolved, the student may then appeal to the Faculty of Engineering Academic Appeals Committee. To do so, the student must make his/her decision known to the Dean in writing within 28 calendar days from the decision date. This is the date of the letter in which the student was first advised of the academic standing decision. The 28 days include mailing time and all time spent in attempting to resolve the matter with the Associate Dean (Student and Co-op Services). Note: Letters are mailed to the student's mailing address of record as maintained by the Registrar's Office and are deemed to be delivered when mailed. An unsuccessful appeal within the Faculty may be carried to the General Faculties Council Academic Appeals Committee. See §23.8.
- b. **Grievances Concerning Grades:** The assignment of marks and grades is the initial responsibility of an instructor. Any grievances concerning grades should first be discussed with the instructor. If the problem is not resolved, the student should talk with the Chair of the Department where the course is taught. For courses taught in the Faculty of Engineering, final recourse is to the Faculty of Engineering Academic Appeals Committee. To appeal to this committee, the student must submit the appeal in writing to the Dean within 60 calendar days after the final examination period.
- c. **Work Term Status:** Faculty initiated withdrawal from a work term, denial of work term or disciplinary decisions related to a work term

are appealable to the GFC Practice Review Board (see Calendar §23.8.2). Failure of a work term which results from lack of performance and/or termination of employment by the employer is an academic standing decision and is appealable as described in (13)a.

A copy of the Faculty of Engineering Regulations regarding appeals may be obtained from the Faculty Office, 5-1 Mechanical Engineering.

## 74 Programs of Study

### 74.1 Faculty Requirements for All BSc in Engineering Programs

Course requirements for Engineering programs are listed in §74.2 (First-Year) and §74.3 through 74.4 (Second-Year and beyond). All Engineering programs must include ENGG 400, ENGL 199, MATH 201, MATH 209, SOC 366, and a single-term course in Engineering Economics (e.g., MEC E 310, CH E 365). A limited number of students will be permitted to replace SOC 366 with ENGG 405 or INT D 200.

All engineering programs must also include at least three units at the 200-level in each of at least three of the following five areas: (1) Strength of Materials, (2) Thermodynamics, (3) Materials Science, (4) Fundamental Electrical Engineering, and (5) Engineering Mechanics (Dynamics).

### 74.2 First-Year Program

Students registering for first-year courses should consult the *Registration Procedures* booklet.

Term 1	Term 2
CHEM 103 (3-1s-3/2)	CHEM 105 (3-0-3/2)
ENGG 100 (1-0-0)	ENCOMP 100 (3-0-1.5)
ENGG 130 (3-0-2)	ENGG 101 (1-0-0)
MATH 100 (3-0-2)	EN PH 131 (3-1s-3/2)
PHYS 130 (3-0-3/2)	MATH 101 (3-0-1)
Complementary Studies Elective (3-0-0)	MATH 102 (3-0-1)

**Notes**

- (1) The Complementary Studies Elective listed in the first term should be selected from any 100-level course with a 3 weight (one term) from the following subject areas (see §201 for course descriptions): Anthropologie, Anthropology, Art and Design (ART H only), Canadian Studies (200-level), Christian Theology, Classics, Comparative Literature, Etudes de la religion, Family Studies, Linguistics, Philosophie, Philosophy, Political Science, Psychologie, Psychology, Religious Studies, Science Politique, Slavic and East European Studies, Sociologie, and Sociology. See §74.6
- (2) Students accepted into the Honors Mathematics stream replace MATH 100, 101, and 102 with MATH 117, 118, and 127 (see §72.14).

### 74.3 Required Courses and Suggested Course Sequence for Traditional Programs

The required program of studies leading to the various BSc in Engineering degrees (traditional programs) are noted below. While all courses listed below are compulsory, the sequencing of courses may differ. All programs require Departmental approval.

Engineering Chart 1 details a suggested course sequence for each Engineering degree program by year and term. Course numbers are followed by the hours of instruction in parentheses. The first number indicates lecture hours, the second number seminar hours, and the third number laboratory hours. Laboratory hours often appear as two numbers separated by a slash, which indicates hours and weeks (e.g., the expression 3/2 means 3 hours of laboratory every second week).

**Note:** For information on Complementary Studies Electives see §74.6.

**Engineering Chart 1** Required Courses and Suggested Course Sequence for Traditional Programs

Chemical	Year 2	Year 3	Year 4

Engineering

## 74.4 Required Courses and Suggested Course Sequence for Co-op Programs

The required program of studies leading to the various BSc in Engineering degrees (Cooperative Education programs) are noted below. While all courses listed below are compulsory, the sequencing of courses may differ. All programs require Departmental approval.

Engineering Chart 2 details a suggested course sequence for each Engineering degree program by year and term. Course numbers are followed by the hours of instruction in parentheses. The first number indicates lecture hours, the second number seminar hours, and the third number laboratory hours. Laboratory hours often appear as two numbers separated by a slash, which indicates hours and weeks (eg. the expression 3/2 means 3 hours of laboratory every second week).

**Note:** For information on Complementary Studies Electives see §74.6.

## 74.5 Technical Electives

### 74.5.1 Chemical

- (1) Of the five single-term technical electives, two must be Engineering Science and/or Engineering Design courses with a combined course weight of 7 units or more, and one elective must be an approved Chemistry course.
- (2) In addition to required courses, programs in Chemical Engineering offer considerable flexibility through electives to develop interdisciplinary interests or to study certain fields in depth. Subject only to feasibility of scheduling and course availability, a student may choose from technical elective courses offered by the Department.

CH E 390, 458, 502, 522, 536, 538, 539, 540, 555, 562 and 564, and MATE 256, 331, 332, 345, 357, 358, 430

or courses offered by other Departments such as

BIOCH 203  
 BIOL 107  
 CHEM 311  
 CIV E 321  
 CMPUT 115  
 EAS 210  
 E E 280, 305, 380, 514  
 ENGG 404, 406  
 MEC E 412, 443, 513  
 MICRB 265  
 PET E 364, 366, 465, 470, 473, 475

A complete list of technical electives is available from the department.

### 74.5.2 Chemical: Computer Process Control Option

- (1) For the technical elective, select any of CH E 474, E E 335, E E 438 (E E 335 is a prerequisite for E E 438) or a Department approved Computing Science course (e.g., CMPUT 201).
- (2) Department of Computing Science quotas exist for computing science courses at and beyond the 200-level. Students should discuss scheduling courses required for this option with the Department of Chemical Engineering advisor.

### 74.5.3 Civil

Following are available elective courses:

- (1) **Construction Engineering:** CIV E 404, 506
- (2) **Environmental Engineering:** CIV E 421, 521
- (3) **Geotechnical Engineering:** CIV E 481, 591
- (4) **Structural Engineering:** CIV E 474, 574
- (5) **Transportation Engineering:** CIV E 412, 511
- (6) **Water Resources Engineering:** CIV E 433, 540

**Note:** A maximum of one technical elective may be taken from another program but only with prior written approval of the Department of Civil and Environmental Engineering. The requirement for electives from three areas of Civil and Environmental Engineering is not negotiable.

### 74.5.4 Computer

Of the five single-term technical electives, one elective must be a 300- or 400-level Computing Science course, and two electives must be from the group of courses CH E 243, MATE 353 and MEC E 250. The remaining two technical electives must be selected from the technical courses offered by the Department of Electrical and Computer Engineering and the Department of Computing Science.

### 74.5.5 Electrical

- (1) The nine technical electives must include one of the six program streams:
  - a. **Communications:** E E 316, 588, 589; one of E E 570 or 571; two of E E 445, 480, 514, 539, 582, 586, 591 or 597; and three more E E approved technical electives.
  - b. **Controls:** E E 480, 539, 561, 565; two of E E 445, 514, 524, 531, 550, 570, 582; and three more E E approved technical electives.

- c. **Digital:** E E 480, 552, 570, 582; two of E E 445, 539, 571, 572, 653, CMPUT 115, 204, EE BE 540; and three more E E approved technical electives.
- d. **Electronics:** E E 316, 570, 571, 572; two of E E 480, 524, 530, 531, 550, 552, 561, 641, 653, EE BE 512; and three more E E approved technical electives.
- e. **Power:** E E 521, 531; and four of E E 445, 514, 524, 525, 527, 528, 529, 530, 545; and three more E E approved technical electives.
- f. **Biomedical:** BME 210 (in 5th term), BME 310 (in 6th term), EE BE 512 (in 7th term), BME 513 and EE BE 540 (in 8th term); and one of E E 316, 323, 480 (in 7th term); and one of E E 563; CMPUT 451, PHS 570 (in 8th term); and two of E E 539, 550, 561, 570, 571, 582 and 588.

- (2) Complete list of Electrical Engineering approved Technical Electives:
  - BME 210, 310, 513
  - E E 316, 323, 445, 480, 514, 521, 524, 525, 527, 528, 529, 530, 531, 539, 545, 550, 552, 561, 563, 565, 570, 571, 572, 582, 583, 586, 588, 589, 591, 596, 597, 598, 599, 641, 653
  - E E BE 512, 540
  - CMPUT 115, 204, 272, 451
  - PHS 570
 In addition to this list, other courses may be taken with Departmental approval.

**Note:** Undergraduate students should be aware that they can take technical electives courses as extra to their BSc degree. It may be possible to use these extra courses as partial credit toward a graduate degree.

### 74.5.6 Engineering Physics

The four technical electives must be chosen, with Departmental consent, such that the electives include at least 9.2 units of Engineering Science and Design.

### 74.5.7 Materials

The three technical electives must be chosen from the approved list of courses. Students may choose to develop a technical interest within elements of the discipline or to develop interdisciplinary interests in business, materials design (with Mechanical Engineering), polymers (with Chemical Engineering or Chemistry), biomaterials, etc. Department approval is required for all elective courses.

### 74.5.8 Mechanical

- (1) Two technical electives must be chosen from the following:
  - BME 553, 563
  - CH E 540
  - EAS 210
  - E E 280, 305, 445 (380, 480 may be taken with approval of the Department of Electrical and Computer Engineering)
  - EE BE 512, 540
  - ENGG 404, 406
  - MATH 311
  - MATE 256, 357, 345, 358, 467
  - MEC E 351, 364, 409, 412, 439, 443, 469, 513, 523, 535, 537, 539, 541, 542, 553, 563, 565, 582
  - MEC E 514 or E E 514
  - MEC E 555 or E E 565
  - MGTS 352 or CIV E 592
  - MP E 497
  - PET E 362, 364, 366, 465, 473
- (2) Undergraduate students can take technical elective courses as extra to their BSc degree. It may be possible to use these extra courses as partial credit toward a graduate degree. See §174.33 for additional details.

### 74.5.9 Mining

Elective courses for all programs in the School of Mining and Petroleum Engineering may be chosen from those offered by the School, the Faculty of Engineering, or by the Faculties of Arts, Science, and Business. School approval is required for all elective courses.

### 74.5.10 Petroleum

Three (or four) technical electives must be chosen from an approved list of technical or business electives.

Elective courses for all programs in the School of Mining and Petroleum Engineering may be chosen from those offered by the School, the Faculty of Engineering, or by the Faculties of Arts, Science, and Business. School approval is required for all elective courses.

## 74.6 Complementary Studies Electives

The Canadian Engineering Accreditation Board requires engineering programs to have a complementary studies component composed of courses that expose students to the thought processes and practices in arts, communication, engineering economics, humanities and management. The complementary studies elective courses within each engineering program may be selected from any of the following subject areas: Anthropology, Art and Design (ART H only), Business (not Management Information System courses, also see §72.12 and §72.13), Canadian Studies, Canadien-Français, Christian Theology, Classics, Comparative Literature, Engineering (ENGG 402, 405 and 420 only), English, Etudes de Religion, Family Studies, History, Interdisciplinary Studies (Departmental approval required), Linguistics, Philosophie, Philosophy, Political Science, Psychologie, Psychology, Religious Studies, Rural Economy, Science Politique, Slavic and East European Studies, Sociologie, Sociology, Women's Studies, and Writing. Courses from other subject areas may be acceptable with approval of an advisor. Complementary studies courses must be graded (not pass-fail), three lecture-hour courses with a written component and final exam. Courses that teach the application of a particular skill (such as courses in physical education and music) are not eligible as complementary studies electives.

Language courses (other than English) may also be taken as complementary studies electives in certain circumstances. Foreign-language courses may not be taken in first year. Students wanting to take foreign language courses as Complementary Studies Electives must obtain prior department approval. Students may only register in courses appropriate to their level of proficiency. Beginner-level language courses are only accepted as complementary studies electives if the student has no prior experience in that language and where equivalent 30-level matriculation courses do not exist. Students who are familiar with a foreign language must receive an assessment of their level of proficiency and register appropriately: introductory or beginner-level courses are not accepted as complementary studies electives if prior knowledge of the language exists. Students with matriculation-level credit in a language must select courses appropriate to their ability.

## 75.2 Registration in Engineering Courses by Students in Other Faculties

Although the Faculty of Engineering is a restricted enrolment faculty, it is possible for students registered in other faculties to enrol in a limited number of Engineering courses. However, students not registered in the Faculty of Engineering must obtain permission to enrol in Engineering courses. The appropriate Department Chair in the Faculty of Engineering is authorized to grant permission.

**Note:** This requirement does not apply to students in programs that include Engineering courses as a formal part of the program.

## 75 Courses

### 75.1 Course Listings

Faculty of Engineering courses are listed in §201, Course Listings, under the following subject headings:

- Bioresource Engineering (BIOEN) (offered by the Faculty of Agriculture, Forestry, and Home Economics)
- Chemical Engineering (CH E)
- Civil Engineering (CIV E)
- Computer Engineering (CMPE) (offered jointly with the Faculty of Science)
- Electrical Engineering (E E)
- Electrical Engineering/Biomedical Engineering (EE BE)
- Engineering, Computing (ENCMP) (offered jointly with the Faculty of Science)
- Engineering, General (ENGG)
- Engineering, Management (ENG M)
- Engineering, Physics (EN PH) (offered jointly with the Faculty of Science)
- Environmental Engineering (ENV E)
- Materials Engineering (MATE)
- Mechanical Engineering (MEC E)
- Mineral Engineering (MNL E)
- Mining Engineering (MIN E)
- Mining and Petroleum Engineering (MP E)
- Petroleum Engineering (PET E)
- Work Experience (WKEXP)
